NovaTech Solutions

Ticket Escalation Policy

Every support ticket follows a documented three-level escalation process. Levels, response targets, and triggers are defined below.

1. Support Levels and Response Targets

Level	Response Target	Handled By
Level 1	Within 2 hours	Service Desk first-line support
Level 2	Within 24 hours	Specialist technical team
Level 3	Within 48 hours or more for complex cases	Subject matter experts and vendors

2. Escalation Triggers

A ticket is escalated to the next level when: (a) it remains unresolved after two follow-ups with the user, or (b) network downtime exceeds 30 minutes. High-priority tickets affecting multiple users may be escalated immediately at triage.

3. Network Infrastructure Checks (CONE5111)

Because most tickets relate to network infrastructure, technicians diagnose in this order before escalating: device cabling and Wi-Fi adapter, switch port and VLAN, router and gateway, then access points and upstream links. Recording the checked layer in the ticket speeds up escalation and avoids repeat diagnostics.

4. Closure

A ticket is closed only after the user confirms the fix. The resolution and root cause are recorded for the knowledge base.
