NovaTech Solutions (Pty) Ltd

Simulated Service Level Agreement (SLA)
Work Integrated Learning – XHIS5122 | Higher Certificate in IT in Support Services

1. Purpose

This Service Level Agreement (SLA) formalises the simulated partnership between NovaTech Solutions (Pty) Ltd (the Client) and the Student Support Team (the Service Provider). The purpose of this agreement is to define responsibilities, expected deliverables, and the innovative contribution forming part of the Work Integrated Learning project.

2. Scope of Work

The Student Support Team agrees to simulate NovaTech's IT Support Operations by:
- Designing and documenting a Service Operations Blueprint.
- Developing an Operational Website and Dashboard that demonstrates internal service workflows.
- Presenting a Final Report and Executive Presentation summarising outcomes and innovations.

Each group must also include one innovative feature not defined in the project brief. This feature must improve NovaTech's simulated IT operations and demonstrate originality, creativity, and problem-solving. It contributes to the Task 1 mark allocation as specified by the lecturer.

3. Innovation Concept (Team Proposal)

(Teams must describe their innovative idea clearly in 150 – 200 words.)

Proposed Innovation Feature Name:AI-Powered Predictive Tickeating & Self Healing Assitant

Description / Concept Summary:

This innovative feature introduces an **AI-based predictive module** into a standard IT ticketing system (such as Freshservice or Jira Service Management), specifically customized for NovaTech, a mid-sized company with 60-80 employees. The system moves beyond traditional reactive ticketing by utilizing machine learning to examine historical ticket data, user behavior, asset logs, and system performance in real-time. Upon detecting a potential problem (like frequent login issues, disk space alerts, or software conflicts), the AI automatically drafts a ticket, recommends or initiates self-healing actions (such as clearing cache, restarting services, or executing updates via automated scripts), and informs the user through a conversational chatbot interface.

***Key features include:**

- A **predictive analytics dashboard** that identifies upcoming issues before they become critical.
- A **natural language self-service portal** allowing employees to describe their problems in simple terms; the AI then categorizes, prioritizes, and routes tickets while providing immediate troubleshooting assistance.

- **Automated updates to the knowledge base** the system learns from resolved tickets to enhance future recommendations. - Integration with the operational website/dashboard for live monitoring of IT health metrics.

This feature enhances basic ticketing processes (such as incident logging, assignment, and SLAs) by introducing proactive, AI-enhanced prevention and resolution methods. It requires minimal additional infrastructure and can be implemented as a module/plugin.

- **Anticipated Impact on NovaTech Operations:** - A potential *40-60% reduction in ticket volume* through self-healing and preventative measures, allowing the Student Support Team (acting as IT staff) to focus on more complex issues.

- **Quicker resolution times** (targeting less than 15 minutes for common issues) and increased first-contact resolution rates.

- Enhanced employee satisfaction and productivity by reducing downtime in an environment with 60-80 users.

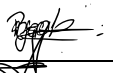

- **Cost savings** on support resources and improved data-driven decision-making through predictive insights. - Illustrates innovation by transitioning IT support from a reactive stance to a more proactive/intelligent approach, highlighting advancements in a simulated ITSM context.

(Word count: ~185) This proposal aligns perfectly with your project deliverables, linking directly to the Service Operations Blueprint and capable of being showcased on the Operational Website/Dashboard (such as mockups of the AI chatbot, predictive alerts, and analytics displayed.

Expected Impact on NovaTech Operations:

The proposed AI chatbot will improve IT support by providing faster responses to common technical problems. Predictive alerts will help identify potential system failures before the occur, reducing downtime. Overall, this innovation will improve efficiency, user satisfaction and decision making at NovaTech.

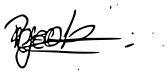

4. Team Composition and Roles

#	Student Name	Student Number	Role in Project	Signature
1	Philasande	St10511112	Network Support Technician	
2	Aviwe	St10534618	Help desk analyst	
3	Thobeka	St10529759	Templates & data owner	
4	Nomvelo	St10508909	SOP & escalation owner	
5	Njabulo	St10506817	Cybersecurity Analyst	

5. Agreement and Acknowledgement

The Student Support Team confirms that:
- All deliverables will meet both academic and professional standards.
- The innovative feature proposed above will be developed, implemented, and presented.
- All communication and documentation will follow NovaTech branding and ethical practice.

By signing below, all parties acknowledge this simulated partnership and agree to the terms herein.

Name	Position	Signature	Date
Phlasande Mkhize	Group Leader – Student Team		28/07/2026
Thobeka Ngcobo	Team Member 2		28/07/2026
Nomvelo Ndaba	Team Member 3		28/07/2026
Aviwe Vato	Team Member 4		28/07/2026
Njabulo Shange	Team Member 5		28/07/2026
Nonsikelelo Dube	Lecturer / NovaTech Manager (Supervisor)
